ABOUT ME

I am a full-stack Ruby on Rails developer. I enjoy crafting elegant and efficient solutions to problems. I have made numerous open source contributions to projects such as Bridgetown, Rails, Stimulus Reflex, and Gatsby. I believe in community building and actively engage with other developers in the Snowpack, Bridgetown, and Stimulus Reflex communities. I am an advanced Linux user and develop my projects in containers using Docker. Currently, I am working on bringing the next generation of asset handling to Rails via Snowpacker.

PROJECTS AND CONTRIBUTIONS

Snowpacker [🔗](#)

Snowpacker is a Rack-based, Ruby integration designed to serve unbundled assets to Ruby web servers via Snowpack. This removes the need for recompiling of assets in development when changes are made. I am also an active member of the Snowpack community.

Bridgetown [🔗](#)

I am a maintainer for Bridgetown alongside Jared White. I also have developed multiple plugins, automations, and repositories for Bridgetown. I developed Bridgetown-Automation-Docker [🔗](#), a code generation tool for quickly setting up Docker with Bridgetown. I also created Bridgetown-Snowpack [🔗](#), a repository of examples and automations for using Snowpack with Bridgetown.

ParamagicBook [🔗](#)

ParamagicBook is a website I created with similarities to Facebook. It comes complete with OAuth2 integration via Facebook, authentication via Devise, deployed to Heroku, and using PostgreSQL as the database. It also utilizes Javascript-based polling to pull in new notifications from the web server.

Other Projects and Contributions

I have contributed to many open source projects including Bridgetown, Gatsby, Stimulus Reflex, and Rails to name a few. All my projects and contributions are on Github.

SKILLS

DevOps

Docker, CI / CD, Github Actions, Heroku, DigitalOcean, AWS, Linode

Testing Frameworks

RSpec, Minitest, Capybara, Cypress, Jest, UVU, JUnit

Languages

Ruby, Bash, SQL, noSQL, Java, PHP, Javascript, Typescript

Databases

PostgreSQL, MySQL, SQLite, MongoDB

Web Frameworks

Rails, Hanami, Sinatra, React, NodeJS, Svelte

Miscellaneous

Stimulus, TailwindCSS, Bootstrap, HTML5, CSS3, JSON, AJAX, XML, REST, GraphQL, Linux
